Chemical product for leather

SOGRACOM RC-1007

Chemical nature:	Compact binder
Appearance:	Whitish viscous liquid
Solids content :	25 ± 1 %
Ph :	8,5 – 10.0
Ionicity:	Anionic

Applicazioni

RC-1007 è un compound studiato appositamente per migliorare pienezza e morbidezza di pelli a fiore corretto, conferendo un aspetto molto simile alla nappa.
E' molto indicato per articoli arredamento, a cui conferisce aspetto naturale e ottima copertura dei difetti senza appesantire il fiore.

Main applications

RC-1007 is a compact binder particularly formulated for softness and fullness improving of corrected grain leathers.
It allows to obtain nappa-like appearance and it is particularly suitable for upholstery articles. When used on slightly corrected grain, it allows to obtain natural look and surface defects covering, when used on deeply corrected grain it forms a compact base with skin surface and allows to obtain either covering and softness without "overloading" the grain, thus resulting in economic advantage .
